

# Appendix

**This page intentionally left blank.**

The following 12 Lead ECG variations should raise suspicion for ischemia, injury, or infarction:

Ischemia:	ST depression, possible T wave inversion
Injury:	ST elevation, possible T wave inversion
Infarction:	ST elevation, possible T wave inversion, possible abnormal Q wave

ST elevation in the following leads should raise suspicion for AMI:

Inferior:	II, III, aVF
Septal:	V1, V2
Anterior:	V3, V4
Lateral:	I, aVL, V5, V6

<b>Age</b>	<b>Procedure / Medication</b>
0-1 Years Old	Infant CPR
1 Year And Older	AED ( pediatric pads for 1-8 year old)
0-8 Years Old	Manual Intraosseous Device Use D25 instead of D-50
1-8 Years Old	Child CPR
0-11 Years Old	Needle Cricothyrotomy Pediatric medication dosing not to exceed maximum adult dose
12 Years And Older	Surgical Cricothyrotomy Adult Intubation for Intermediates
16 Years And Older	Combitube

# Apgar Score

The Apgar score should be obtained and recorded initially and at 5 minutes with the birth of delivery of any infant.

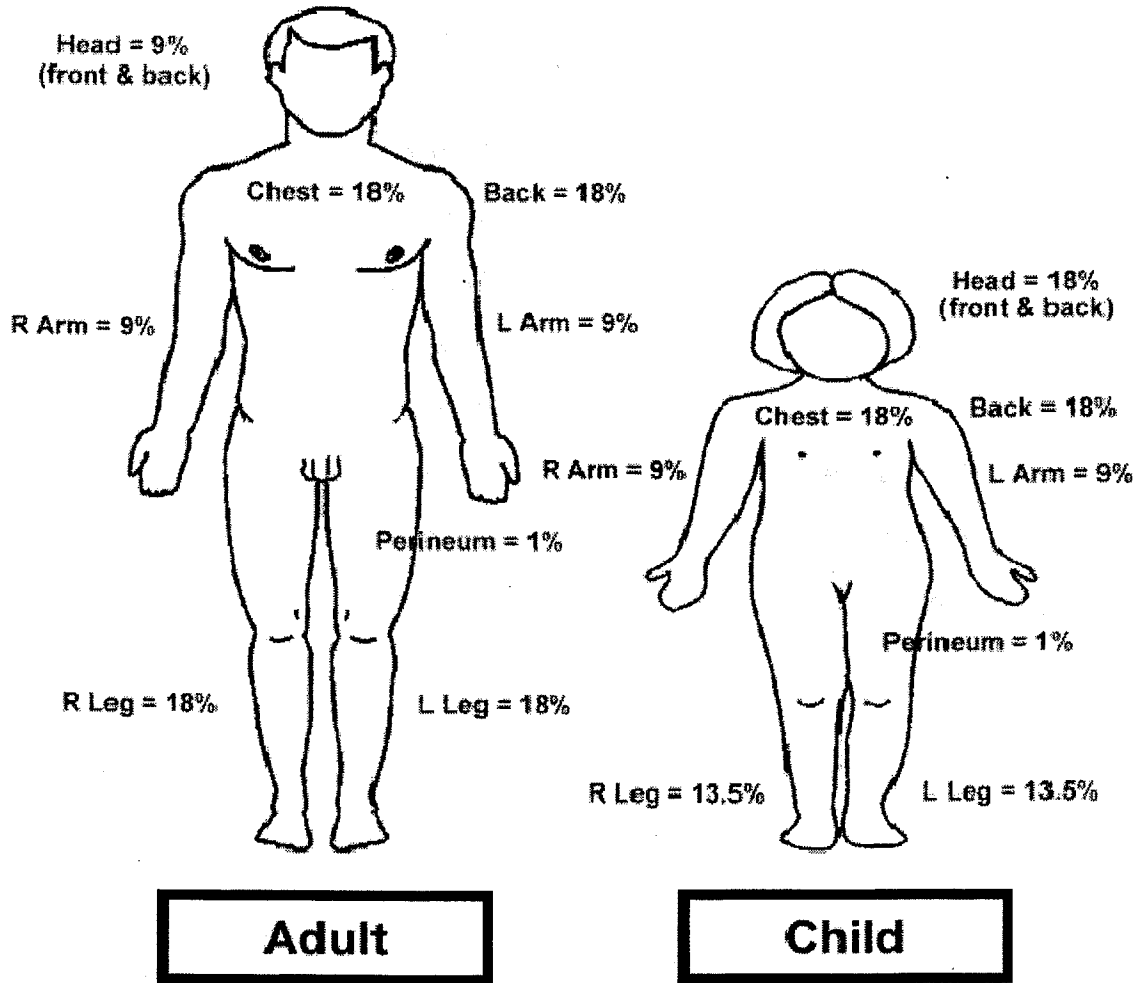

<b>Sign</b>	<b>0</b>	<b>1</b>	<b>2</b>
Heart Rate	Absent	<100 min.	>100 min.
Respiratory Effort	Absent	Weak Cry	Strong Cry
Muscle Tone	Limp	Some Flexion	Good Flexion
Reflex Irritability (when feet stimulated)	No Response	Some Motion	Cry
Color	Blue; Pale	Body Pink Extremities Blue	Pink

The Glasgow Coma Score can be used to determine a patients level of consciousness.

The Revised Trauma Scale can be used to determine a patients severity of injury.

# Tricyclic Antidepressants (TCA)

## Generic Names

Amitriptyline

Nortriptyline

Imipramine

Doxepin

Trimipramine

Amoxapine

Desipramine

Protriptyline

Clomipramine

## Trade Names

Endep  
Elavil  
Etrafon  
Limbitrol  
Trional

Aventyl  
Pamelor

Tofranil

Sinequan

Surmontil

Asendin

Norpramin

Vivactil

Anafranil
