

Hot Oven or Hot Car... it's the same thing!

Hot cars put children's lives at risk!!

- Temperatures can reach up to 200 degrees in a car
- Each year children left in cars die from the heat
- Within minutes, the temperature in a car climbs
- The hotter the day, the faster the heat rises inside the car
- Cracking the window does nothing to decrease the temperature inside the car
- Having the air conditioning on before leaving the car does not keep the vehicle cool
- If you see a child alone in a car, call the police or dial 911

Hot cars can kill...

Never leave a child alone in a car!
