Revision History

Action	Description	Date
Final	Report Sealed	May 7, 2021
Revision 1	Replaced Fig. 3 and revised description of proposed mitigation	May 10, 2021

Executive Summary

Topic	Page(s)
Proposed Facility	1
A multifamily residential development is proposed to be built in Arden, NC on 10.2 acres of vacant land located along Crescent Hill Drive. The site development plan consists of 252 multifamily residential units. The area around the site consists of a church and single-family homes.	
Access Point Studied	1
The proposed development will have access points onto Crescent Hill Road (SR 3531) and Watson Road (SR 3530).	
Existing & Proposed Level of Service	
The intersections operating at LOS E or LOS F in 2021 and under build-out conditions (2022) are: US 25 (Hendersonville Road) and NC-280 (Airport Road), NC 280 (Airport Road) and Old Airport Road (SR 1547), and NC 280 (Airport Road) and Watson Road. All other intersections and approaches operate at LOS D or better in both 2021 and 2022.	
Traffic Counts	Table 1 (Page 5), Figure 5, Appendix C
Peak hour turning movement counts (7:00 - 9:00 AM & 4:00 - 6:00 PM) were conducted on Thursday, March 18, 2021, at the existing studied intersections. Table 1 shows the AM and PM peak periods for each intersection. Figure 6 shows the traffic movements at each intersection and Appendix C shows the actual counts.	
Development Traffic	18
The development is projected to generate 1,372 daily trips, 85 AM peak hour trips, and 108 PM peak hour trips.	
Proposed Mitigation	36
If additional right of way is available at the southwest corner of Crescent Hill Drive and US 25 (Hendersonville Road), separate left and right turn lanes could be constructed to reduce delay and provide convenience for current and future users. (See Figure 11)

Introduction and Background

This report summarizes the findings of the Traffic Impact Analysis (TIA) performed for the proposed Crescent Hill Multifamily Development. Figure 1 locates Arden in the region and Figure 2 shows the site location within Arden. Figure 3 shows the Crescent Hill Multifamily Development is proposed to be built on 10.2 acres of vacant land is located southwest of the intersection of US 25 (Hendersonville Road) and NC 280 (Airport Road)/US 25 Alternate (Sweeten Creek Road). The proposed site is located within Arden, an unincorporated community located in southern Buncombe County, North Carolina, south of the City of Asheville. The purpose of this study is to determine the impact of the anticipated traffic associated with this development and its effect on the intersections listed in the Parameters and Study Area section of the report. The traffic generated by the development will be added to the background traffic, and then analyzed to determine any potential adverse traffic impacts on the adjacent roadway network from the proposed development.

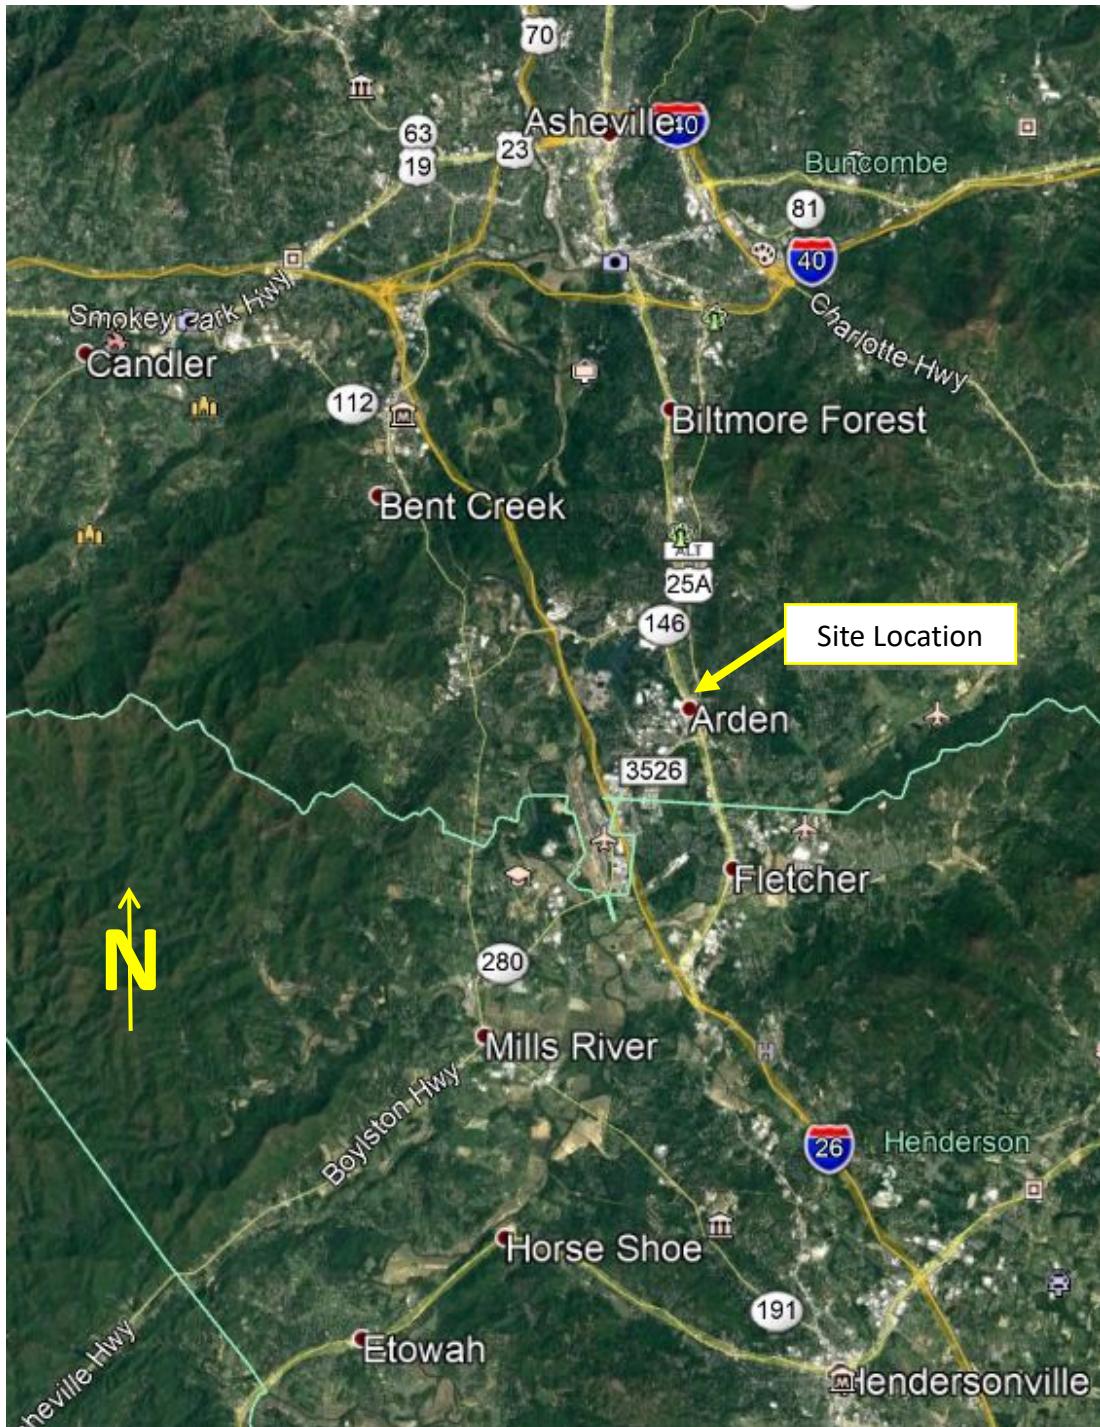

Figure 1 Region of Proposed Site

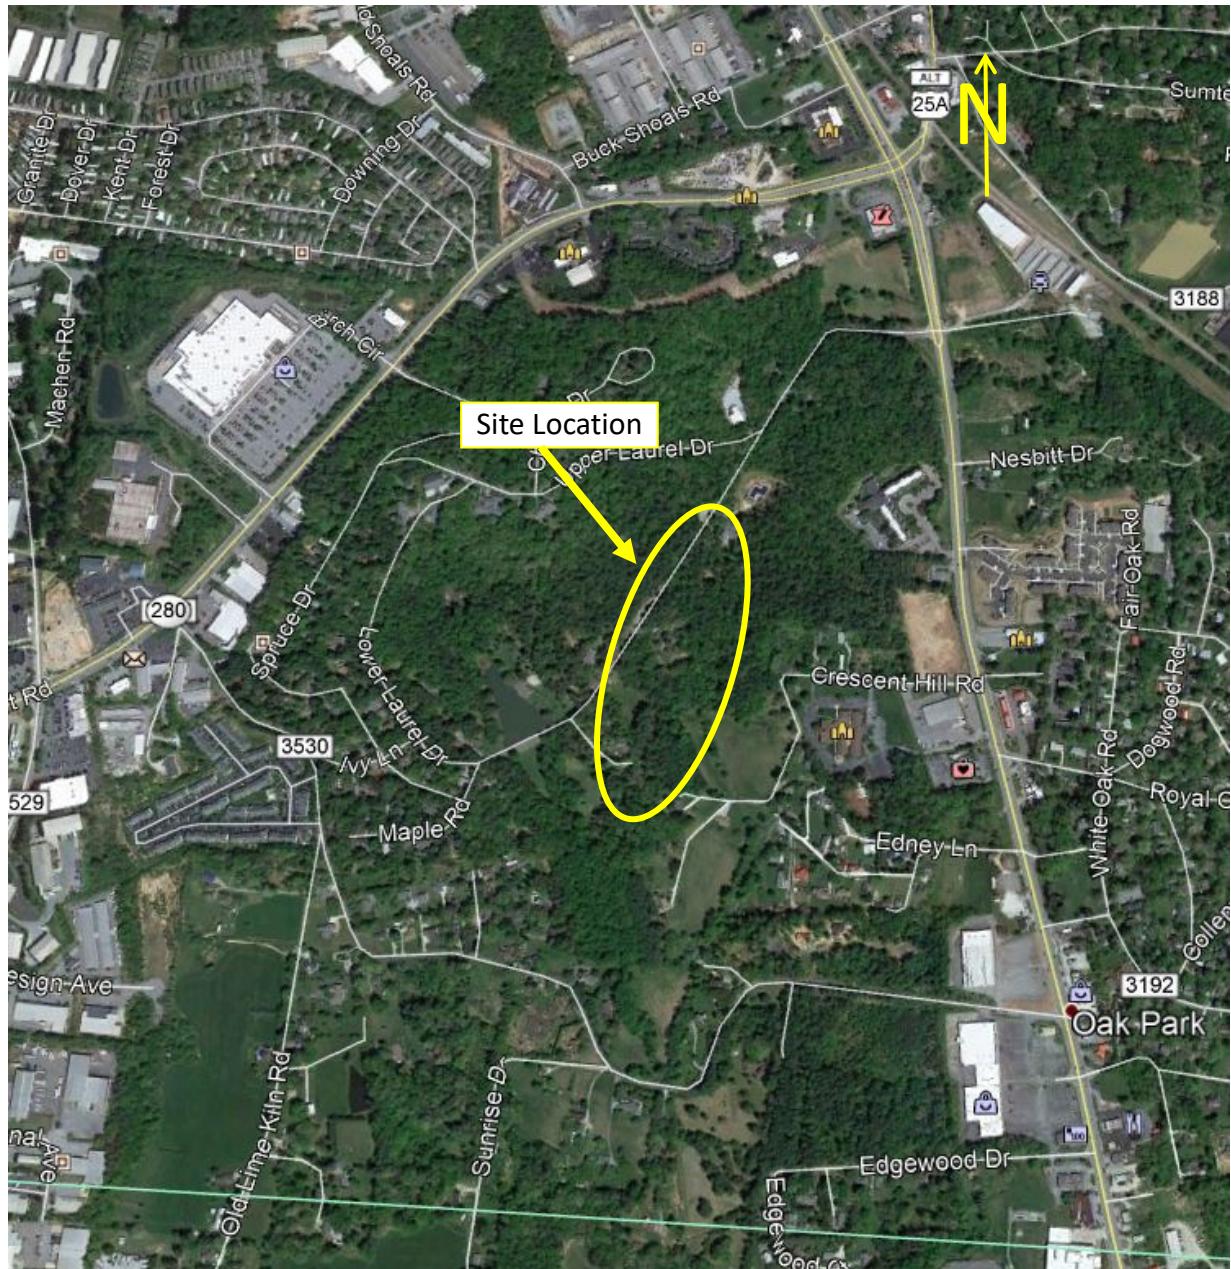

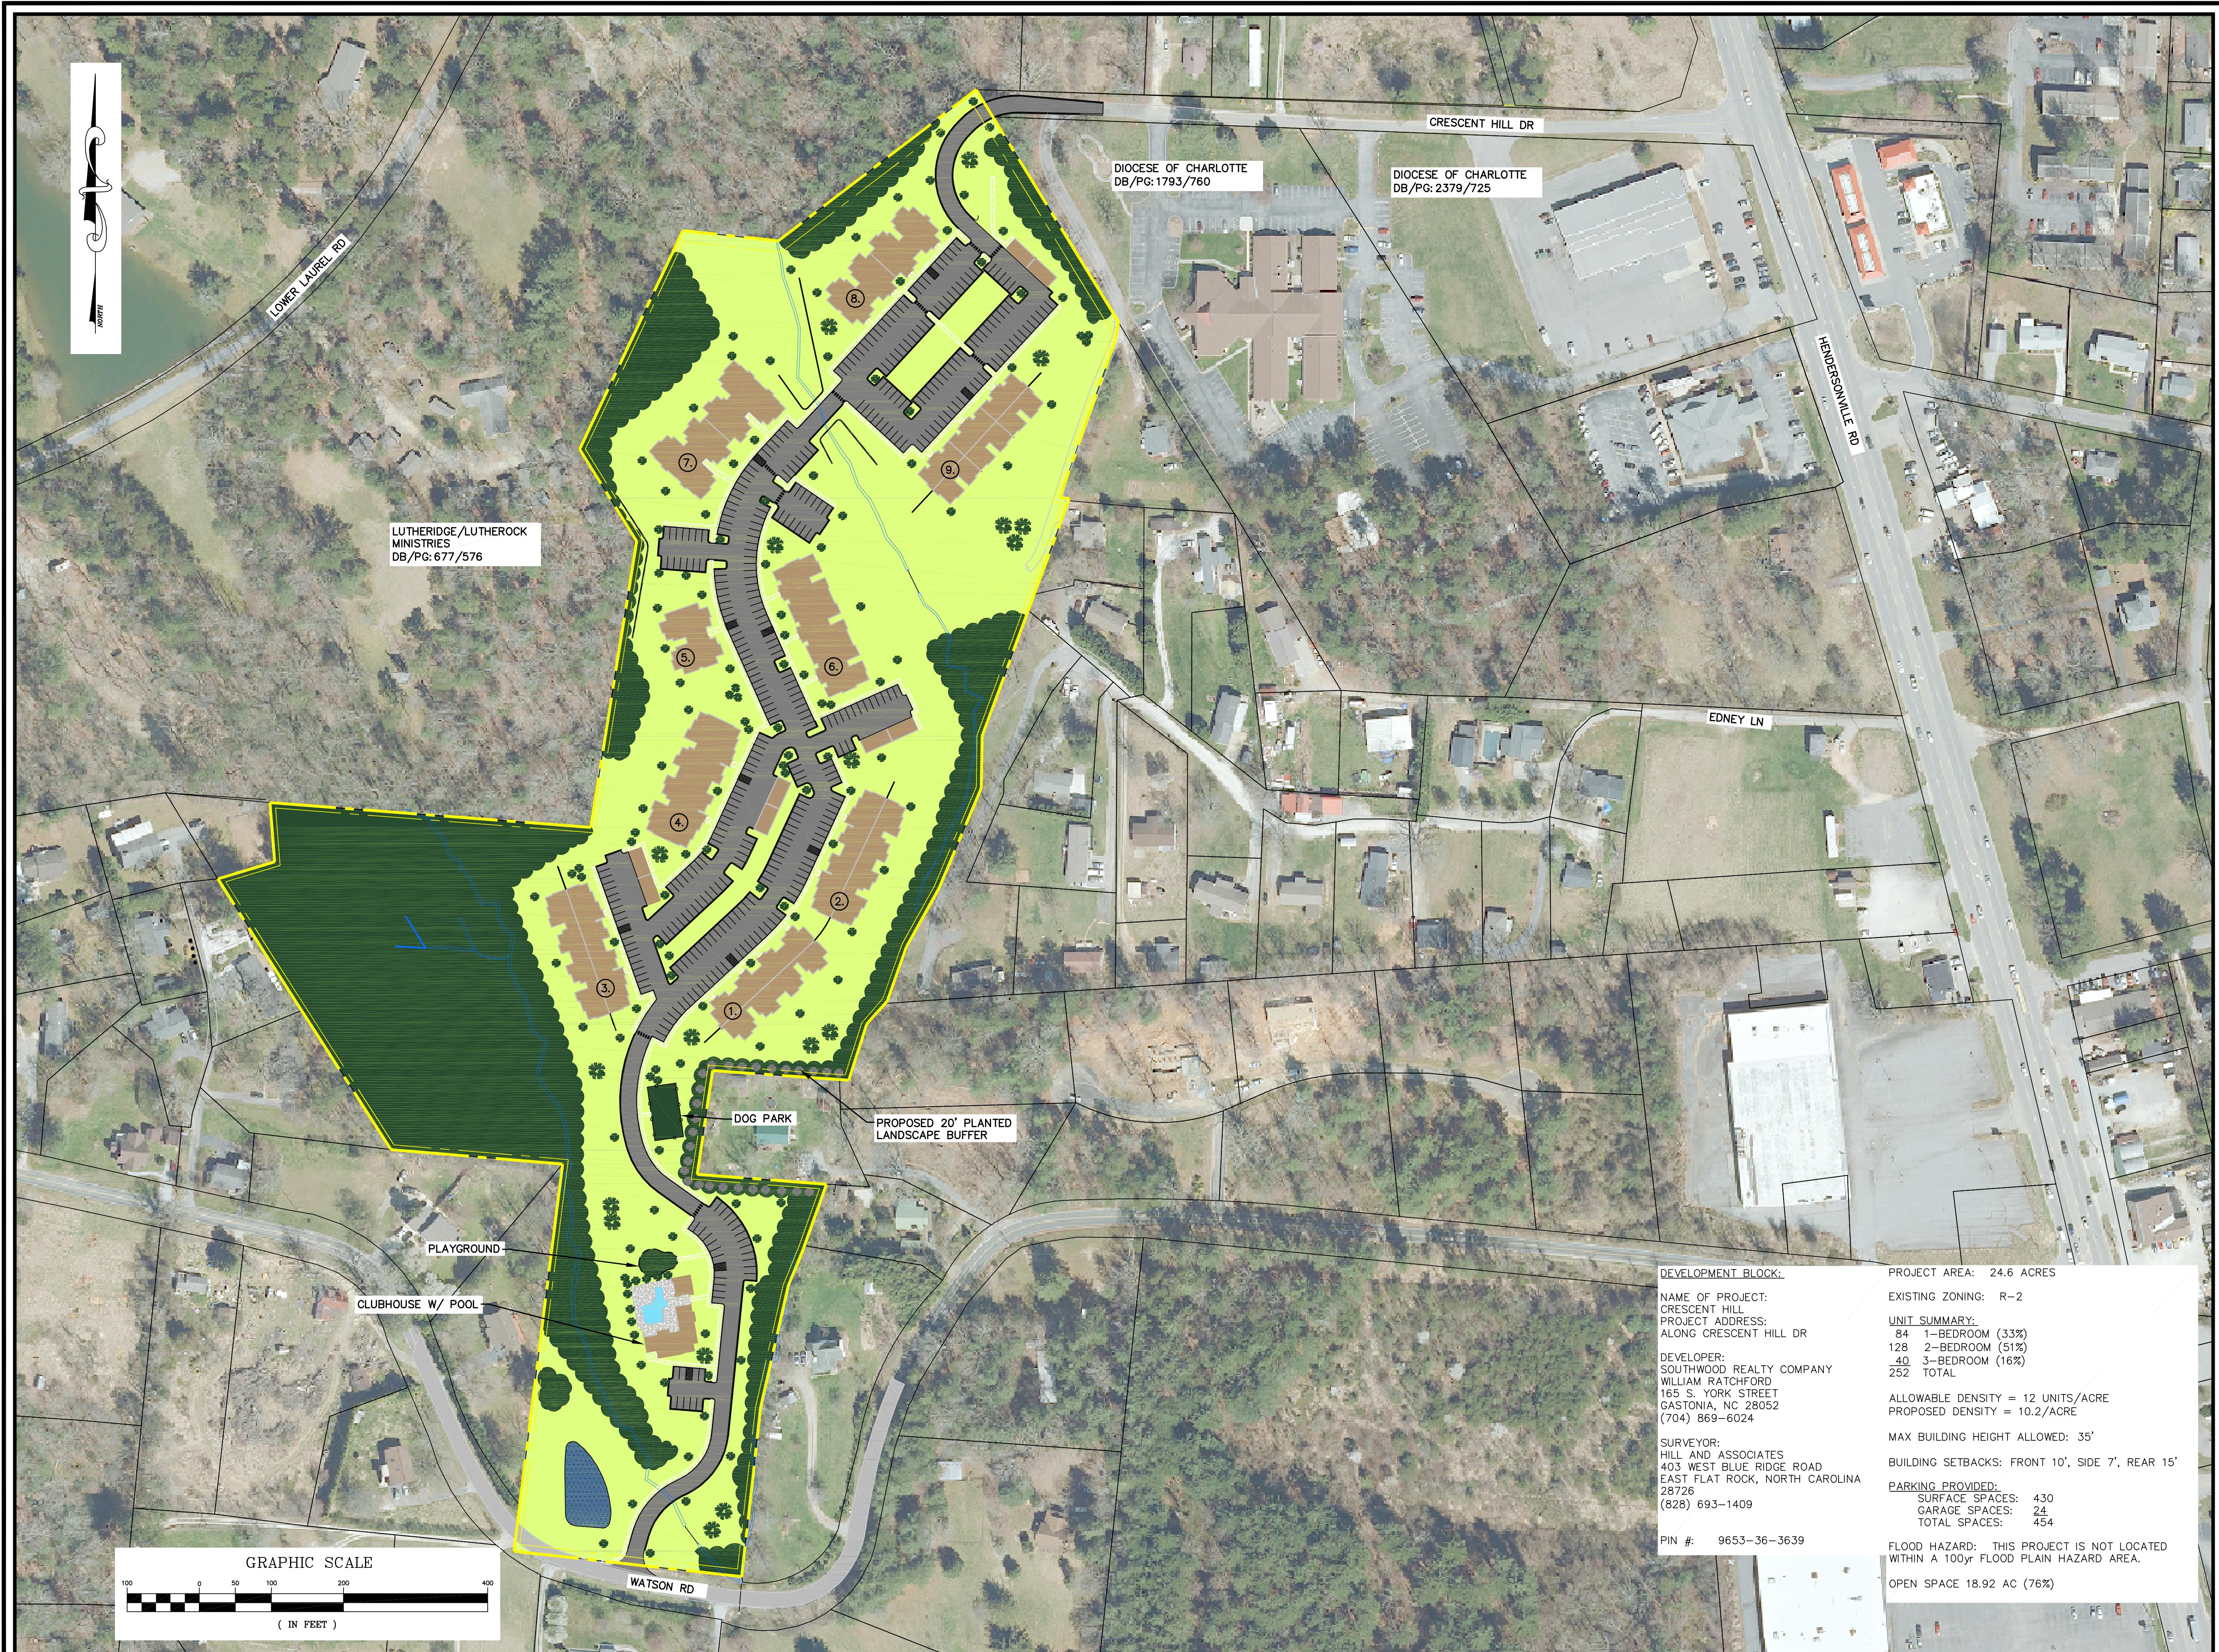

Figure 2 Proposed Site Location

Proposed Site Use and Access

Figure 3 shows the preliminary development plan consisting of 252 multifamily units. The proposed development will have an access point along Watson Road (SR 3530) approximately 0.44 miles west of US 25 (Hendersonville Road) and an access point on Crescent Hill Drive (SR 3531) approximately 0.18 miles west of US 25 (Hendersonville Road).

Parameters and Study Area

This study follows NCDOT's TIA process including NCDOT's concurrence on scope and parameters. A copy of the approved NCDOT TIA Checklist is included in Appendix A.

Table 1 shows the intersections studied in this TIA. Peak hour turning movement counts (7:00 - 9:00 AM & 4:00 - 6:00 PM) were conducted on Tuesday, March 9, 2021, at the existing studied intersections. From these counts, AM and PM peak hours were determined for the AM and PM peak periods. AM and PM peak hours for each intersection were analyzed for existing, background, and full build-out traffic conditions. Table 1 also shows the AM and PM peak hours for the intersections.

Table 1: Studied Intersections

Main Line	Cross Street	AM Peak	PM Peak
US 25 (Hendersonville Road)	NC 280 (Airport Road) /US 25 Alternate (Sweeten Creek Road)	7:15 AM – 8:15 AM	4:30 PM – 5:30 PM
US 25 (Hendersonville Road)	Crescent Hill Drive / Access Drive 1 (SR 3531)	7:15 AM – 8:15 AM	4:30 PM – 5:30 PM
US 25 (Hendersonville Road)	Royal Oaks Road (SR 3190)	7:15 AM – 8:15 AM	4:30 PM – 5:30 PM
US 25 (Hendersonville Road)	Watson Road (SR 3530)	7:15 AM – 8:15 AM	4:45 PM – 5:45 PM
US 25 (Hendersonville Road)	Old Airport Road (SR 1547)	7:15 AM – 8:15 AM	4:30 PM – 5:30 PM
NC 280 (Airport Road)	Watson Road (SR 3530)	7:15 AM – 8:15	4:45 PM – 5:45 PM
Watson Road (SR 3530)	Access Drive 2	NA	NA

Other roadway inventory collected included posted speed limits, roadway geometrics, turn lane taper, storage lengths, and existing traffic signal timings.

Additional analysis parameters for the analysis are included in Table 2 (at right).

Table 2: Analysis Parameters

Parameter	Value
Build-out Year	2022
Annual Growth Rate	2.0%
Build-out Peak Hour Factor (PHF)	0.90

Surrounding Land Uses

Arden is an unincorporated community located south of Asheville in Buncombe County, North Carolina. The immediate areas surrounding the proposed site consist of a church and multiple single-family home sites.

Surrounding Roadways

According to NCDOT's Online GIS, US 25 (Hendersonville Road) is classified as a United States route. US 25 (Hendersonville Road) is a four-lane two-way road with a two-way left-turn lane within the study area. The posted speed limit is 45 mph. According to NCDOT data, the Average Annual Daily Traffic (AADT) on US 25 (Hendersonville Road) was 30,500 vehicles per day (vpd) south of the intersection with US 25 Alternate (Sweeten Creek Road) in 2018, the AADT was 24,000 vpd between Crescent Hill Drive and Royal Oaks Road in 2016, and the AADT was 31,000 vpd between Watson Road and Old Airport Road in 2018.

NCDOT's Online GIS classifies NC 280 (Airport Road) as a North Carolina route. NC 280 (Airport Road) is a four-lane two-way road with a two-way left-turn lane within the study area. The posted speed limit is 45 mph. The AADT on NC 280 (Airport Road) west of the intersection with US 25 (Hendersonville Road) was 24,000 vpd in 2018.

NCDOT's Online GIS classifies US 25 Alternate (Sweeten Creek Road) as a United States route. US 25 Alternate (Sweeten Creek Road) is a two-lane two-way road with a posted speed limit of 45 mph. The AADT on US 25 Alternate (Sweeten Creek Road) northeast of the intersection with US 25 (Hendersonville Road) was 16,000 vpd in 2018.

NCDOT's Online GIS classifies Crescent Hill Drive (SR 3531) as a secondary route. Crescent Hill Drive (SR 3531) is a two-lane two-way road. The speed limit was not available at the time of the study. From traffic data collected, it shows that the daily traffic is approximately 530 vpd in 2020.

NCDOT's Online GIS classifies Royal Oaks Road (SR 3190) as a secondary route. Royal Oaks Road (SR 3190) is a two-lane two-way road with a subdivision posted speed limit of 25 mph. The AADT on Royal Oaks Road (SR 3190) east of US 25 (Hendersonville Road) was 990 vpd in 2016. NCDOT's Online GIS classifies Watson Road (SR 3530) as a secondary route. Watson Road (SR 3530) is a two-lane two-way road with a posted speed limit of 25 mph. From traffic data collected, the daily traffic is approximately 2,410 vpd in 2020.

NCDOT's Online GIS classifies Old Airport Road (SR 1547) as a secondary route. Old Airport Road (SR 1547) is a two-lane two-way road with a two-way left-turn lane. The posted speed limit is 35 mph. The AADT on Old Airport Road (SR 1547) east of the intersection with US 25 (Hendersonville Road) was 11,500 vpd in 2018.

Analysis Method

A traffic impact analysis is a method of determining the impacts of new development traffic on the surrounding roadway. This is done by comparing the effects of additional traffic generated

by the site to the traffic that would normally use the road network upon completion of the development. This traffic is defined as background traffic. Figure 4 is an outline of the process.

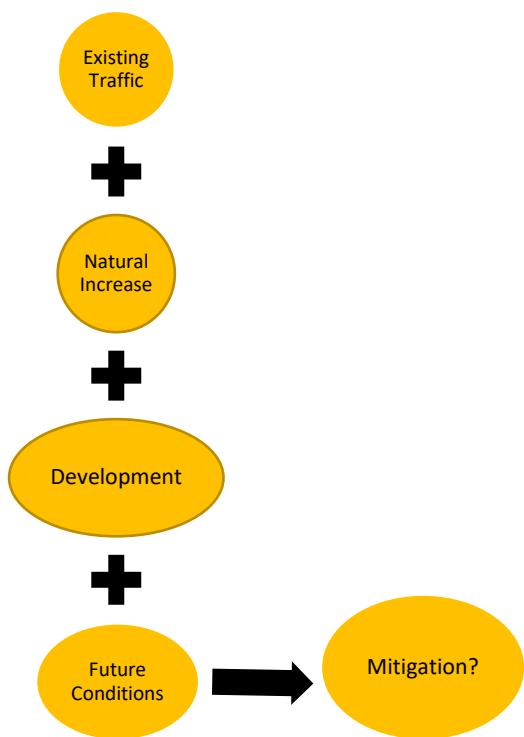

Figure 4 Analysis Flowchart

Background traffic is the traffic that would be at the studied intersections in the build-out year (2022), without the proposed development. Background traffic is the existing traffic plus any change in volumes caused by the general growth trends in the area or nearby specific developments. It also assumes no significant roadway geometric changes from the existing condition scenario. A growth factor of 2% was used for this study up to the anticipated project completion year (build-out) of 2022. The site-generated traffic is added to the background traffic to determine the build-out traffic. These two numbers, background and build-out, are then compared to determine the overall impact that the development traffic has on the roadway.

The studied intersections were analyzed using Synchro. Synchro is a specialized software package that allows the user to model intersections and roadway networks to determine levels of service (LOS), based on the thresholds specified in the Highway Capacity Manual (HCM) published by the Transportation Research Board. Synchro also gives an analysis of capacity, vehicle delay, volume to capacity ratio (v/c), queue lengths, traffic signal timing, and vehicle flow rate.

Sim Traffic was also used, which is an extension of Synchro that allows the user to better model closely spaced intersections. This animation software allows the user to see traffic moving through the study intersections.

The HCM defines peak hour factor (PHF) as the hourly volume during the maximum-volume hour of the day divided by the highest 15-minute flow rate during the peak hour. PHF is a measure of traffic demand fluctuations during the peak hour. A PHF of 1.0 means that traffic during the peak is steady. The smaller the PHF the more variable traffic is during the peak hour. The HCM recommended default values are based on data collected throughout the United States. The HCM lists the peak hour factor of 0.88 for Rural and 0.92 for Urban conditions. A peak hour factor of 0.90 was used, which is the median value between these two factors and is the recommended PHF recommended by NCDOT for background and build-out Synchro software simulations.

The HCM defines capacity as “the maximum hourly rate at which persons or vehicles can reasonably be expected to traverse a point during a given time period under prevailing roadway, traffic, and control conditions”. Level of Service (LOS) is a term used to represent different driving conditions, with respect to traffic congestion. It is defined as a “qualitative measure describing operational and perceptual conditions within a traffic stream”. LOS “A” represents free-flow traffic conditions with no congestion. LOS “F” represents severely impacted traffic flow due to vehicle congestion. LOS is generally determined by the total “Control Delay” experienced by drivers (Control delay is vehicle delay that is ultimately caused by the traffic control device. This includes deceleration delay, queue move-up time delay, stopped delay, and acceleration delay). Table 3 shows typical delays associated with each Level of Service for intersections.

Table 3: Highway Capacity Manual Level of Service and Delay

Level of Service	Average Control Delay Per Vehicle (Seconds)	
	Un-signalized Intersection	Signalized Intersection
A	0-10	0-10
B	10-15	10-20
C	15-25	20-35
D	25-35	35-55
E	35-50	55-80
F	> 50	> 80

A well-designed transportation system balances travel efficiency with construction cost. That means that roads will have more traffic during peak periods than during non-peak times.

The analysis for un-signalized intersections can project very high delays on the side street, thus it is recommended to use LOS measurements as a comparative tool rather than a design tool. The 95th percentile queue the vehicle queue (back-up) that has a 5% probability of being exceeded during the analysis period. At un-signalized intersections, p_0 (queue free percent) is the probability of there being no backup.

Existing Traffic

To determine existing traffic, peak period turning movement counts were conducted at the existing intersections listed above and in accordance with the methodology previously explained.

The U-turn volumes were combined with the left turn volumes for the Synchro and Sim Traffic analysis for the following times and locations:

- PM traffic count at US 25 (Hendersonville Road) at NC 280 (Airport Road) northbound and eastbound approaches, and

- AM and PM traffic count at US 25 (Hendersonville Road) at Old Airport Road (SR 1547) southbound approaches.

Figure 5 shows the 2021 peak hour volumes. The existing lane diagram is shown in Figure 6. The existing turning movement counts are in Appendix C.

Volume Balancing

The *NCDOT Congestion Management Capacity Analysis Guidelines* recommend that: “*All efforts should be made to ensure that upstream and downstream traffic volumes along corridors balance and maintain continuity. If balanced volumes are not attainable, explanation should be provided.*” In this case, the differences in the AM and PM traffic volumes on the segment between NC 280 (Airport Road) & Watson Road to NC 280 (Airport Road) and US 25 (Hendersonville Road) are attributable to the Walmart Supercenter and a large residential neighborhood situated midway between these intersections. To adjust these traffic flows to comply with the recommended guidelines, in this case, would mean applying significant adjustments to the inbound and outbound flows in the range of triple digits, rendering the analyses unreflective of actual, or projected conditions with the proposed buildout of the project. It was thought to be more technically sound to analyze the actual unbalanced traffic to determine the true anticipated impact of the proposed development.

Background Traffic

Background traffic is the traffic that would be at the studied intersections in the build-out year (2022), without the proposed development. Background traffic is comprised of existing traffic and any change caused by growth trends in the surrounding area or nearby developments. It also assumes no significant roadway changes from the existing conditions. As noted earlier, the growth rate of 2% per year was used for calculating background traffic for this study for the project build-out year 2022.

Figure 7 shows the expected AM and PM peak hour background traffic volumes for 2022.

Trip Distribution

Trip distribution is the assignment of project traffic throughout the road network as it enters and exits the site. The pathway is assigned to show the traffic as it travels through the study area intersections. The trip distribution for this development was estimated from the existing traffic volume patterns within the surrounding roadway network, the surrounding population densities, the location of the proposed development, and engineering judgment. Figure 8 shows the entering and exiting peak hour trip distribution percentages.

Trip Generation

The 10th edition of the Trip Generation Manual published by the Institute of Transportation Engineers (ITE) was used as the source of data for determining site-generated traffic. The proposed development has an ITE Land Use Code 221 – Multifamily Housing (Mid-Rise). Mid-rise multifamily housing includes apartments, townhouses, or condominiums located in a building with at least three other dwelling units and that has between three and ten levels (floors).

Trip generation volumes for LUC 221 were calculated using the fitted curve equations for the peak hours of adjacent street traffic, in accordance with the NCDOT Congestion Management Unit guidelines. The equation for the AM-Peak Trips is $LN(T) = 0.98LN(DU) - 0.98$. The equation for the PM-Peak, Trips is $LN(T) = 0.96(DU) - 0.63$.

The summarized trip generation numbers for the AM and PM peak hours along with daily totals are in Table 4.

Table 4 Typical Weekday Trip Generation (2022)

ITE Land Use Code	Size	Daily	AM Peak Hour			PM Peak Hour		
			Entering (26%)	Exiting (74%)	Total	Entering (61%)	Exiting (39%)	Total
221 – Multifamily Housing (Mid-Rise)	252 DU	1,372	22	63	85	66	42	108

The AM and PM peak hour trips were distributed to the roadway network using the percentages in Figure 8 and are shown as AM and PM peak hour Entering and Exiting site generated trips in Figure 9.

Build-Out Traffic

Build-out traffic is the total traffic volume that will be present on the surrounding roadway network when the project is complete and fully occupied. 2022 is the expected build-out year for this project. Build-out traffic is the sum of background traffic and the proposed site traffic, which is distributed in the AM and PM peak hour periods according to the entering and exiting percentages shown in Figure 8. The anticipated build-out AM and PM Peak Hour traffic is shown in Figure 10.

Analysis of Existing Traffic Conditions

The analysis for existing conditions was based on *NCDOT's Congestion Management Capacity Analysis Guidelines*. Table 5 shows the existing LOS, delay, v/c ratio, and queue for the studied intersections. The existing traffic volumes from the AM & PM peak hours were analyzed using existing lane configurations and traffic control conditions. Since existing turning movement count data was collected, the existing peak hour factor (PHF) was used for analyzing existing conditions. Based on HCM and NCDOT guidance, the free-flow movements / approaches were not analyzed for existing conditions.

The capacity analysis (Synchro) reports for the existing conditions are in Appendix B.

Table 5: Analysis of Existing AM/PM Peak Hour Traffic Conditions

Analysis of Background Traffic Conditions

The analysis for background conditions was based on methodologies presented in NCDOT's *Congestion Management Capacity Analysis Guidelines*. To estimate the background LOS, delay, v/c ratio, and queue at the study intersections, the background traffic was analyzed using existing lane configurations and traffic control conditions and results are provided in Table 6. A PHF of 0.90 was used for all background conditions in accordance with NCDOT guidelines. Based on HCM and NCDOT guidance, the free-flow movements / approaches were not analyzed for background conditions. The 0.90 PHF is used by traffic engineering companies and NCDOT to simulate worst-case scenarios for LOS calculations. The worst-case PHF assumption can sometimes create fluctuations in LOS and delay readings without any change in the traffic volumes.

The capacity analysis (Synchro) reports for the existing conditions are in Appendix B.

Analysis of Build-Out Traffic Conditions

The analysis of build-out conditions was based on methodologies presented in NCDOT's *Congestion Management Capacity Analysis Guidelines*. The build-out traffic was analyzed using existing lane configurations and traffic control conditions as well as the addition of the proposed site access points. A PHF of 0.90 was used for all build-out conditions in accordance with NCDOT guidelines. The build-out LOS, delay, v/c ratio, and queue at the study intersections in the AM and PM peak hours are provided below in Table 7. Based on HCM and NCDOT guidance, "LOS for un-signalized intersections should only be reported for individual stop-controlled or yield movements." As a result, the free-flow movements / approaches were not reported for the build-out traffic conditions. The 0.90 PHF is used by traffic engineering companies and NCDOT to simulate worst-case scenarios for LOS calculations. The worse-case PHF assumption can sometimes create fluctuations in LOS and delay readings without any change in the traffic volumes.

The Synchro Reports for the Build-out conditions are in Appendix B.

Table 7 Analysis of Build-out AM/PM Peak Hour Traffic Conditions

Intersection	Approach	Lane	Queue Length (ft) [AM]	LOS [AM]	Delay (sec) [AM]	V/C Ratio [AM]	Queue Length (ft) [PM]	LOS [PM]	Delay (sec) [PM]	V/C Ratio [PM]

Conclusions

This section compares the background and build-out conditions for the studied intersections. The intersection traffic movements that exceed delay and level of service thresholds are discussed in the text and the results provided in the accompanying tables. The mitigation recommendations at each of the studied intersections were based on NCDOT's *Policy on Street and Driveway Access to North Carolina Highways* (Driveway Manual) methodology and mitigation threshold requirements, and engineering judgment.

According to NCDOT guidelines, mitigation improvements to the studied roadway network are required if at least one of the following conditions exists when comparing base network conditions to project build-out conditions:

- Average intersection or approach delay increases by 25% or greater while maintaining the same LOS, or
- LOS degrades by at least one level, or
- LOS is 'F'

The comparison of background and build-out conditions is shown in Table 8 below, and in cases where the build-out conditions exceed NCDOT operational thresholds, the need for mitigating improvements is discussed.

Table 8 Comparison of Background vs Build-out Peak Hour Traffic Conditions

US 25 (Hendersonville Road) @ NC 280 (Airport Road)/US 25 Alternate (Sweeten Creek Road)

As can be seen in Table 8, there are slight delay increases for the intersection approaches during AM and PM peak hour operations. The 25 percent increase in delay threshold is not anticipated to be exceeded, however, the LOS is F for the eastbound and westbound movements in both AM and PM peak hours, unchanged from the background conditions.

For the northbound and southbound thru movements, levels of service are acceptable. Mitigation at this location would involve system-level improvements.

US 25 (Hendersonville Road) @ Crescent Hill Drive (SR 3531)/ Proposed Access

Table 8 shows that the eastbound approach on Crescent Hill Drive will experience delay increases of 42% and 72% for the AM and PM peak hours, respectively. The LOS is anticipated to remain the same as the background conditions at LOS E and F. Mitigation at this location could involve the addition of eastbound turn lanes, although as a stop-controlled approach, with the high thru volumes on US 25 (Hendersonville Road), only marginal improvement could be expected.

US 25 (Hendersonville Road) @ Royal Oaks Road (SR 3190)

As can be seen in Table 8, all the approaches are anticipated to operate with an acceptable LOS in the build-out conditions. Since the LOS for these approaches remain acceptable and site-generated traffic is not anticipated to degrade the general roadway or driver safety at this intersection, no changes are recommended.

US 25 (Hendersonville Road) @ Watson Road (SR 3530)

As shown in Table 8, the differences in the delay increase percentages between background and the build-out traffic exceed the NCDOT mitigation thresholds for the US 25 (Hendersonville Road) northbound approach. The LOS is anticipated to remain the same, at LOS A for both AM and PM peak hours. Because of the anticipated minor increase in delay of .5 seconds and the acceptable operating conditions for the northbound thru approach, no changes are recommended.

US 25 (Hendersonville Road) @ Old Airport Road (SR 1547)

As can be seen in Table 8, the difference in delay, between background traffic and the build-out traffic exceed the NCDOT mitigation thresholds for the westbound approach of Old Airport Road (SR 1547). The increase in delay from .02 to .20 yields a 900% increase. It should be noted that the approach LOS at the intersection is anticipated to remain at LOS A. As a result of the very slight delay increase and excellent levels of service, no changes are recommended at this intersection to accommodate traffic generated by the site under build-out conditions. The addition of site-generated traffic is not anticipated to degrade the general roadway or driver safety at this intersection.

NC 280 (Airport Road) @ Watson Road (SR 3530)

The differences in approach movement LOS, delay, and queues between background traffic and the build-out traffic do not exceed the NCDOT mitigation thresholds. Although it should be noted that the LOS for both background and build-out conditions do not change. As a result, no changes are recommended at this intersection to accommodate traffic generated by the site under build-out conditions. The addition of site-generated traffic is not anticipated to degrade the general roadway or driver safety at this intersection.

Watson Road (SR 3530) @ Development

As can be seen in Table 8, the LOS, delay, and queue data for the build-out traffic do not exceed the NCDOT mitigation thresholds. As a result, no changes are recommended at this intersection to accommodate traffic generated by the site under build-out conditions. The addition of site-generated traffic is not anticipated to degrade general roadway or driver safety at this intersection.

A turn lane warrant analysis was performed for the proposed Watson Road Site Access Drive intersection. No turn lanes were shown to be warranted due to the low volumes anticipated at the proposed access. The turn lane warrant chart is provided in Appendix E.

Queuing Analyses

Queuing analyses were performed to determine the effect of the build-out traffic on intersection traffic queues. Sim Traffic was used to generate the Queuing and Blocking Reports for the study area intersections for each analysis scenario. The following guidelines indicate where mitigation improvements are required to ensure that appropriate turn lane storage lengths for queuing vehicles are provided:

Mitigation is required when the Build condition exceeds the No-Build conditions by any of the following minimum thresholds:

1. *Increase of 50' or more in queue length,*
2. *Left-turn and/or right-turn lane warrants (NCDOT's Policy on Street and Driveway Access to North Carolina Highways) are identified, or*
3. *Build with Capacity Improvements queue exceeds the existing storage length.*

Table 9 shows the study area intersection approach queue length increases of 50' or more with the addition of project traffic.

Table 9: Queue Length Increases

Main Line	Cross Street	Movement	AM Peak	PM Peak
US 25 (Hendersonville Road)	NC 280 (Airport Road)	Westbound Left	135'	+55'
US 25 (Hendersonville Road)	Old Airport Road	Northbound Left	No Change	+60'

Mitigation Recommendations

US 25 (Hendersonville Road) @ Crescent Hill Drive (SR 3531)

The potential geometric improvement to mitigate the delay attributable to additional proposed site traffic is shown in Figure 11. If additional right of way is available at the southwest corner of the intersection, separate left and right turn lanes could be constructed to reduce delay and provide convenience for current and future users. This will allow the right turning vehicles not to be impeded by the eastbound left-turning movement which adds to excessive delay for eastbound traffic.

As noted earlier, the approach is stop-controlled, and the delays are associated with the high thru volumes on US 25 (Hendersonville Road) and the need for an acceptable gap for vehicles to enter the traffic stream.

NCDOT TIA Scoping Checklist

NCDOT Traffic Impact Analysis Need Screening / Scoping Request

A Traffic Impact Analysis (TIA) may be required for developments based on the site trip generation estimates, site context, or at the discretion of the NCDOT District Engineer. The Applicant or the TIA Consultant shall submit this form along with the site plan to the District Engineer to determine the TIA need and, if a TIA is required, initiate the TIA scoping process. Without an approved scope, the TIA is incomplete and will be rejected until the study is revised to conform to NCDOT's TIA requirements.

Project Name: Crescent Hill Multifamily

Previous Name: If Applicable _____

Location: Crescent Hill Drive, Arden

County: Buncombe **Municipality:**

Project Description: 252-unit residential townhome development

Project Contact:	Applicant	TIA Consultant
Company Name	Triangle Real Estate of Gastonia /	J.M. Teague Engineering & Planning
Contact Person	William Ratchford	William Thompsen
Phone Number	704-869-6024	828-456-8383
Email	william.ratchford@southwoodrealty.com	will@jmteagueengineering.com
Mailing Address	165 York Street Gastonia, NC 28053	1155 N. Main St. Waynesville, NC 28786

Site Plan Prepared By: Wgla Engineering, Pllc

See site plan/vicinity map requirements on page 2.

Parcel Size: 24.6 Acre(s)

TIA Consultant
J.M. Teague Engineering & Planning
William Thompsons
828-456-8383
will@jmteagueengineering.com
1155 N. Main St.
Waynesville, NC 28786
Site Plan Date: 1-07-2020

Anticipated Build-Out Year: 2022

Weekday Site Trip Generation - Do NOT adjust for mode split, pass-by, internal capture, or diverted trips.

Refer to the current *NCDOT Congestion Management Capacity Analysis Guidelines* for acceptable trip calculation methods and data sources.

**Explain local or other data sources, if used:

- The estimated site trips meet NCDOT's TIA trip threshold of 3,000 daily trips.
 - The estimated site trips meet the municipal TIA trip threshold of _____
 - This project is located in a known STIP and/ or local CIP project # U-2801A
 - This project includes a rezoning request.
 - The proposed site access is located within 1,000 feet of an interchange.
 - The Applicant requests for a new or modified control-of-access break.
 - The Applicant requests for a new or modified median break.

NCDOT Traffic Impact Analysis Need Screening / Scoping Request

Site Plan/Vicinity Map Requirement for TIA Need Screening: While the site plan may not be finalized during the TIA scoping stage, the graphic representation of the proposed development shall provide adequate details on the development scope and context. More specifically, the site plan/map shall clearly show the location and type of each access point, spacing to adjacent and opposing driveways or intersections, internal street network, proposed buildings/parcels with their anticipated uses and sizes at full build-out and, if applicable, any nearby interstate, US, NC or Secondary Roads (SR).

Project Name: Crescent Hill Multifamily **Project Reference Number:** _____

- A TIA is Required by the Local Government.** In addition, the study area is expected to include NCDOT maintained transportation facilities.
- A TIA is Required by NCDOT,** per the [Policy on Street and Driveway Access to North Carolina Highways](#).

If either or both of the boxes above are checked, the Applicant/TIA Consultant is hereby requested to fill out as much as possible of the following TIA scoping checklist, and return it along with the supporting documents to NCDOT prior to the scoping meeting.

- A TIA is NOT required.** This decision is based on the development information presented above. Changes in the development plan will require re-evaluation of the TIA need, and may necessitate a TIA. The Applicant should inform the District Engineer of any significant changes in a timely fashion to avoid delays or rejections of the driveway permit / encroachment agreement applications.

Additional Comments:

The TIA need decision is made by the NCDOT Division 13 District 2 on _____.

NCDOT District Representative's Signature
Email concurrence may be used in lieu of the signature.

Site Plan and Access

Provide a site plan illustrating site access, internal and external roadways, buildings and land uses.

Refer to NCDOT's [Policy on Street and Driveway Access to North Carolina Highways](#) pages 14 and 15 for site plan requirements.

Identify site access.

New Access	On Road	Access Type		Driveway Spacing		
	Road Name	Permitted Movements	Traffic Control	Distance (ft)	Direction	Nearest Intersection / Access
Access A	Crescent Hill Dr	Conventional Full-Mvmt	Stop	932	West	US 25
Access B	Watson Rd.	Conventional Full-Mvmt	Stop	2,300	West	US 25
Access C						
Access D						
Access E						
Access F						
Access G						
Access H						

Existing Access	Existing Intersection of		Access Modification	Proposed Interconnectivity (If Applicable)		
	Road A	Road B		Connector #	Road Connected	Adjacent Development
Access 1			Please Select	Connector 1		
Access 2				Connector 2		
Access 3				Connector 3		
Access 4				Connector 4		

Additional access clarifications and provisions (e.g., proposed control-of-access or median breaks, modifications of existing access, loading/unloading area access, bike/pedestrian accommodation).

Proposed K-12 School Site

- NCDOT [MSTA School Traffic Calculator](#) for Select School Type shall be used.
- Peak Hour Factors (PHFs) shall be adjusted/weighted for new school trips (0.5 PHF by default).
- Internal school circulation analysis is required, and should be submitted in advance or concurrent with the TIA submittal.
- Clarify traffic operation plans (e.g. traffic circulation pattern, pedestrian access, drop-off/pick-up zone location and configuration, queue storage area and, if applicable, staggered start times).

NCDOT TIA Scoping Checklist

Trip Generation

The TIA Consultant shall prepare trip generation estimates following the current [NCDOT Congestion Management Capacity Analysis Guidelines](#), and submit the calculation sheets and supporting information to the District Engineer for approval prior to capacity analysis.

****Explain local or other data sources, if used:**

Existing Site Trip Information for Redevelopment Projects (Attach separate sheets as needed)

Future Year Conditions

- Project Build-Out Year: _____ 2022
- Future Analysis Year(s): _____ 2022
- Identify below any funded/committed future transportation improvements, as well as any approved but incomplete developments near the site.

Funded STIP / Local CIP Project	Project Description		Year Complete
2801A	Widen to 4 lanes from US 25 to Rock Hill Rd (SR 3081)		
Nearby Approved Development	Location	Future Land Use (exclude any completed phases)	Committed Improvements

- Annual Growth Factor: _____ 2 %

Justification/Data Source: As advised by NCDOT in attached comments .

Local Comprehensive Transportation Plan Compliance

- Identify Applicable Local Transportation Planning Documents

- Identify Applicable Roadways inside the Study Area

Road Name	Classification	Speed Limit	Proposed Cross-Section	Proposed Right-of-Way	Compliance Requirements	Affect Study Intersection #

NCDOT TIA Scoping Checklist

Study Method

The traffic analysis shall follow the current [NCDOT Congestion Management Capacity Analysis Guidelines](#), [Policy on Street and Driveway Access to North Carolina Highways](#), and use the current approved version of analysis software (e.g. Synchro/SimTraffic, HCS, Sidra Intersection, TransModeler).

The study shall include the following analysis scenarios for each analysis period.

1. Existing Conditions
2. Future No-Build Conditions (existing + background growth + approved developments + committed or funded improvements)
3. Future Build Conditions (future no-build + site trips)
4. Future Build with Improvements Conditions (future build traffic with improvements to mitigate the proposed development's impacts) and, if applicable:
 - 5. TIP Design Year Analysis _____
 - 6. Alternative Access Scenario (without proposed control-of-access or median break / modification)

The following additional analysis/outputs should be provided as warranted:

- Signal Warrant Analysis for accesses/intersections _____
- Multi-Modal Level of Service Analysis _____
- School Loading Zone Traffic Simulation _____
- Phasing Analysis (scope separately as needed) _____
- Safety/Crash Analysis _____
- Control-of-Access Modification Justification _____
- Median Break / Modification Justification _____
- Other _____

Submittals

In addition to the hardcopies required below, the TIA Consultant shall provide the District Engineer and, if required, the local government an electronic copy of the study documents, including the latest site plan, figures and appendices, in searchable PDF files and the original traffic analysis files (e.g., Synchro, HCS).

To expedite review, the NCDOT electronic submittals shall also be delivered concurrently to:

- Div. Traffic Engr
- Regional Traffic Engr
- Congestion Management
- Other _____

Submittals	NCDOT		Local Government	
	Electronic	Hardcopy	Electronic	Hardcopy
Trip Generation & Distribution	Required		Please Select	
Draft TIA Report	Required			
Final Sealed TIA Report	Required			

Additional Comments (municipal TIA requirements, approved variations from NCDOT guidelines)

Since the full build-out of this development project is scheduled to occur several years prior to the letting of STIP Project U-2801A, this analysis concentrated upon the development's impacts to the current geometry of US-25 A. ROW scheduled for 2024 and construction start is 2027.

TIA
Submittal

Agreement by All Parties

The undersigned agree to the contents and methodology described above for completing the required traffic impact analysis for the proposed development identified herein. Any changes to the above methodology contemplated by the Applicant or the TIA Consultant must be submitted to the District Engineer in writing. If approved by NCDOT, then such changes may be accepted for the TIA report. Subsequent revisions to the development plan (e.g. land use, density, site access, or schedule) may require additional scoping and analysis, and may modify the TIA requirements.

This agreement shall become effective on the date approved by NCDOT, and shall expire _____ months after the effective date or upon significant changes to the roadway network and/or development assumptions, whichever occurs first. Once expired, renewal or re-scoping will be required for subsequent TIA submittals.

TIA Scoping Checklist Approval Date: _____

Unadjusted Daily Site Trips: _____

- The approved TIA Scoping Checklist is included in this submittal.
- LOS D or better is expected at all study intersections after proposed mitigations.
- The study report is sealed by a NC Professional Engineer with expertise in traffic engineering.
- This study has identified all known deficiencies with and without the proposed development.
- This study has identified mitigation measures to adequately accommodate the site trips.

Explain here if any of the boxes above are unchecked:

We have LOS E and LOS F for Existing, Background, and Build-out conditions for US 25 and NC 280 intersection approaches. Deficient intersection approach LOSs are not attributable to project trips. See the conclusions and mitigation recommendations section of the TIA for full explanation

The undersigned affirms that, except for the deviations noted below, the TIA submittal conforms to the current [NCDOT Congestion Management Capacity Analysis Guidelines, Policy on Street and Driveway Access to North Carolina Highways](#), and the TIA Scoping Checklist approved by the NCDOT District Office. The undersigned also acknowledges that the TIA will be rejected if the deviations and justifications are not properly documented and approved by NCDOT.

Deviations and Justifications (e.g., changes in site plan, development schedule, site trip and off-site trip estimates, study area, data collection, analysis period and method. Attached separate sheets if needed.)

We have LOS E and LOS F for Existing, Background, and Build-out conditions for US 25 and NC 280 intersection approaches. Deficient intersection approach LOSs are not attributable to project trips. See the conclusions and mitigation recommendations section of the TIA for full explanation.

Crescent Hill Multifamily TIA

SCOPING REVIEW

BULLET LIST OF NCDOT COMMENTS AND CONCERNS (SC-2020-268)

December 14, 2020

The Department of Transportation (NCDOT) has performed a review of the scoping document for the proposed Crescent Hill Multifamily development prepared by J.M. Teague (received December 7, 2020). According to the document, the proposed development is to be located in the southwest quadrant of US 25 (Hendersonville Rd) and SR 3531 (Crescent Hill Rd) in Arden, Buncombe County. The scoping document states that the full build-out of the development is to be constructed by 2022 and is to consist of residential land use. Based on our review, we have the following comments at this time:

General

- TIP Project U-2801A is in the immediate area of this project. The scoping documents indicate that TIP Design Year Analyses will not be provided and that a rezoning request will NOT be made for this project. **If this rezoning was not included in the forecast, then TIP Design Year Analysis should be provided. Justification should be provided for its exclusion.**

Trip Generation

- The Trip Generation appears reasonable.

Trip Distribution and Growth Rate

- Trip distribution appears reasonable.
- **Growth factor of 3.85 percent appears too high based on AADT growth trends in this area; it is suggested to rather use a 2 percent growth factor.**

Study Intersections

- Proposed study intersections appear reasonable.

Site Plan and Proposed Driveways

- Site plan appears reasonable and matches with the trip generation; however, please ensure that the proposed driveways are in accordance with the NCDOT Driveway Manual.

NOTE: This list should not be considered all-inclusive. Further review may identify additional areas of concern.

Crescent Hill Multifamily TIA

SCOPING REVIEW

BULLET LIST OF NCDOT COMMENTS AND CONCERNS (SC-2020-268)

March 10, 2021

The Department of Transportation (NCDOT) has performed a review of the scoping (2nd submittal) document for the proposed Crescent Hill Multifamily development prepared by J.M. Teague (received March 8, 2021).

According to the document, the proposed development is to be located in the southwest quadrant of US 25 (Hendersonville Rd) and SR 3531 (Crescent Hill Rd) in Arden, Buncombe County. The scoping document states that the full build-out of the development is to be constructed by 2022 and is to consist of 252 units of Multifamily Housing (Mid-Rise) [LUC code 221]. Based on our review, we have the following comments at this time:

General

- TIP Project U-2801A is in the immediate area of this project. The scoping documents indicate that TIP Design Year Analysis will not be provided and that a rezoning request will NOT be made for this project. **If this rezoning was not included in the forecast, then TIP Design Year Analysis should be provided.** **Justification should be provided for its exclusion.* [Comment from December 11, 2020 CMS scope review]**
 - *NOTE: Current LET date is 09/21/2027

Trip Generation

- The updated Trip Generation appears reasonable. The trip generation increased from 1077 trips to 1372 trips. [Observation]

Trip Distribution and Growth Rate

- Updated trip distribution appears reasonable.
- Updated growth factor of 2 percent appears reasonable.

Proposed Study Intersections

- Proposed study intersections appear reasonable. The intersections below have been added into the proposed network (Observation):
 - NC 280 (Airport Rd) and SR 3530 (Watson Rd)
 - US 25 (Hendersonville Rd) and SR 3530 (Watson Rd)
 - SR 3530 (Watson Rd) and Proposed Site Access Dwy

Site Plan and Proposed Driveways

- Updated site plan appears reasonable and matches with the updated trip generation; however, please ensure that the proposed driveways are in accordance with the NCDOT Driveway Manual.*
 - *NOTE: Additional proposed site access has been added onto SR 3530 (Watson Rd). [Observation]

NOTE: This list should not be considered all-inclusive. Further review may identify additional areas of concern.

Will,

In addition to the TIP Project being LET after the development build out, the project involving a request for a conditional use approval by the Buncombe County Board of Adjustment rather than a Rezoning appear to be justification for not including a rezoning request.

The District office concurs with the scoping checklist for the proposed Development. This email concurrence may be used in lieu of the approval signature. Please submit TIA in accordance to NCDOT policies and procedures. Thanks in advance.

Nick,

For the General Comment provided in the Scoping checklist review (copy attached) , I did some follow up checking with the development team and the project involves a request for a conditional use approval by the Buncombe County Board of Adjustment rather than a Rezoning. Would a need for a conditional use approval justify checking the rezoning request item? I know that the parcels have had the R-2 zoning classification for quite a few years and the FBRMPO Long-Range Plan Travel Demand Model used for forecasting relies upon land use projections consistent with future land use maps and zoning for Asheville and Buncombe County.

In addition, the note with the Current LET date for the STIP 2801A project will be added to the Scoping Checklist in the Additional Comments section at the bottom of Page 6 of 7.

Let us know if this clarifies the issue.

Thanks,

Will Thomsen

6 Phase
Fully Actuated
(Asheville Signal System)

NOTES

- Refer to "Roadway Standard Drawings NCDOT" dated January 2018, "Standard Specifications for Roads and Structures" dated January 2018, and all applicable sections of the latest version of the generic Project Special Provisions. The PSP can be accessed at the following website: <http://connect.ncdot.gov/resources/safety/pages/its-and-signals.aspx>
- Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
- Phase 1 and/or phase 5 may be lagged.
- The order of phase 3 and phase 4 may be reversed.
- Set all detector units to presence mode.
- In the event of loop replacement, refer to the current ITS and Signals Design Manual and submit a Plan of Record to the Signal Design Section.
- Omit "WALK" and flashing "DON'T WALK" with no pedestrian calls.
- Program pedestrian heads to countdown the flashing "Don't Walk" time only.
- Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values shall supersede these values.

3 Phase
Fully Actuated
Asheville Signal System

NOTES

- Refer to "Roadway Standard Drawings NCDOT" dated January 2012 and "Standard Specifications for Roads and Structures" dated January 2012.
- Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
- Phase 5 may be lagged.
- Reposition existing signal head numbered 22.
- Set all detector units to presence mode.
- In the event of loop replacement, refer to the current ITS and Signals Design Manual and submit a Plan of Record to the Signal Design Section.
- Locate new cabinet so as not to obstruct sight distance of vehicles turning right on red.
- Pavement markings are existing.
- Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values supersede these values.

NC Dept of Transportation
Division of Highways
Final Drawing Date: 7/10/2018
R. N. Zeman
F1589073472248C
ITS & Signals Unit

This plan supersedes the one signed and sealed on 2/15/2017.

5 Phase
Fully Actuated
(Asheville Signal System)

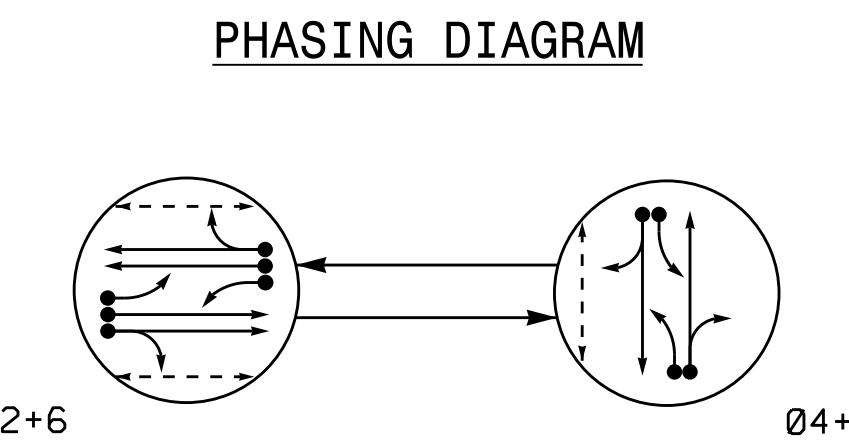

NOTES

- Refer to "Roadway Standard Drawings NCDOT" dated January 2018 and "Standard Specifications for Roads and Structures" dated January 2018.
- Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
- Phase 1 and/or phase 5 may be lagged.
- Reposition existing signal head numbered 42.
- Set all detector units to presence mode.
- In the event of loop replacement, refer to the current ITS and Signals Design Manual and submit a Plan of Record to the Signal Design Section.
- Locate new cabinet so as not to obstruct sight distance of vehicles turning right on red.
- Omit "WALK" and flashing "DON'T WALK" with no pedestrian calls.
- Program pedestrian heads to countdown the flashing "Don't Walk" time only.
- Thirty days after implementation of the revised signal operation, Sign B orange flags may be removed at the discretion of the Regional Traffic Engineer.
- Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values supersede these values.
- Coordination may be required with U-4715B (Asheville Signal System Upgrade) project.
- Closed loop system data:
Controller Asset #0048.

2 Phase
Fully Actuated
Asheville Signal System

NOTES

- Refer to "Roadway Standard Drawings NCDOT" dated January 2012 and "Standard Specifications for Roads and Structures" dated January 2012.
- Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
- Set all detector units to presence mode.
- In the event of loop replacement, refer to the current ITS and Signals Design Manual and submit a Plan of Record to the Signal Design Section.
- Locate new cabinet so as not to obstruct sight distance of vehicles turning right on red.
- Omit "WALK" and flashing "DON'T WALK" with no pedestrian calls.
- Program pedestrian heads to countdown the flashing "Don't Walk" time only.
- Pavement Markings are existing.
- Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values supersede these values.
